

I strongly support HB2844.

I have volunteered on a number of projects to restore and support beaver habitat in Oregon. Beavers are vital for the ecological health of streams, wetlands, and ponds.

Their activity improves water quality and sustains the storage of groundwater. The increased volume of waterways due to beaver activity is vital for lowering stream temperatures and thereby facilitating enhanced breeding opportunities for various endangered salmon species.

OREGON IS THE BEAVER STATE-----let's support our beaver friends!
