

Have we demonstrated a need for this right now? Please direct legislation to getting children back in school. I'd like to see schools lead in providing education and not direct more and more resources as schools becoming a venue for primary care. Low income families have OHP and can access primary care doctors. Please allow parents to participate in the healthcare of their children. I prefer my child receive health care from his/her pediatrician who "knows" the full health history of my child and can therefore make appropriate clinical decisions. I do not want my children receiving healthcare from nursing students who do not have the ability to take into account my child's individual health history. Thank you for focusing this session's legislation on Covid 19 relief, wild fire relief, and unity across the state.
