

To whom it may concern,

While I do not mind the industrial production of marijuana or hemp, I strongly support its regulation especially regarding rural production. We are reliant on well water for already established and sustainable businesses. Threats to the water as well as potential safety threats (use of butane, please not the current fire in Clackamas as well as our recent wildfire season) create a direct threat to our businesses, homes, safety, and livelihood. Please restrict and limit access for this kind of hemp and marijuana production from rural areas to the more appropriate industrial zones. Thank you
