

I am writing in vigorous support of HB 2021. This bill will help us immensely to do our part in stopping the increase in green house gas then reducing and doing it in a manner that we can sustain. At the same time there will be green well paying jobs available wherever people live in Oregon to weatherize home and business space with conservation of electricity. There will also be good jobs in installation and manintiance of wind and solar generation widely in the state. The great increase in wind, solar and conservation of energy is necessary to be rid of GhG producing fuel in generation of electricity.

Please do not let this unique opportunity pass. Promote and approve HB 2021.
