

3/22/2021 - 3:15 PM House Bill 2794 and 2722 House Committee on Agriculture and Natural Resources

Creates Land use and Wildfire Policy Advisory Committee; HB 2794 and 2722 is a total waste of one million dollars or more, probably closer to two million when it said and done. Wildlife is smarter than humans when it comes to wildfire, they smell smoke the animals move or run from the smoke to another area. Kind of like the birds, whales ... they migrate for their own comfort and well-being and especially their instinct of survival. What can a bunch a people sitting around talking about it do about it anyway? Go gather up all the wildlife, their wild and going to do everything possible to get away from humans trying to capture these wild animals! In the SEVEN PAGES of HB 2794 and 2722 of ridiculousness and spend fest; Fish & Wildlife was mentioned once. Now who in the legislature or governor's office are scheming for friends & business associates, because there is no scientific solution to protecting and corralling free and roaming wild animals from wildfire? Then a half a million more for an independent study, for the same, the legislative assembly so out of control its teetering on recklessness. Lastly, why does the legislature offer two Bills that are exactly the same under two different assignment numbers, seems as a way to have what the lawmakers want if there is only dispute given to one Bill over the other, if a citizen misses the exact companion Bill, sounds fishy, pun intended....
