

Oregon's Wildfire Problem: not just a forest problem

Figure: Large wildfire perimeters in Oregon from 2000-2018 on forests and rangelands. Note, many of the largest fires in the state have occurred in southeastern Oregon sagebrush rangelands.

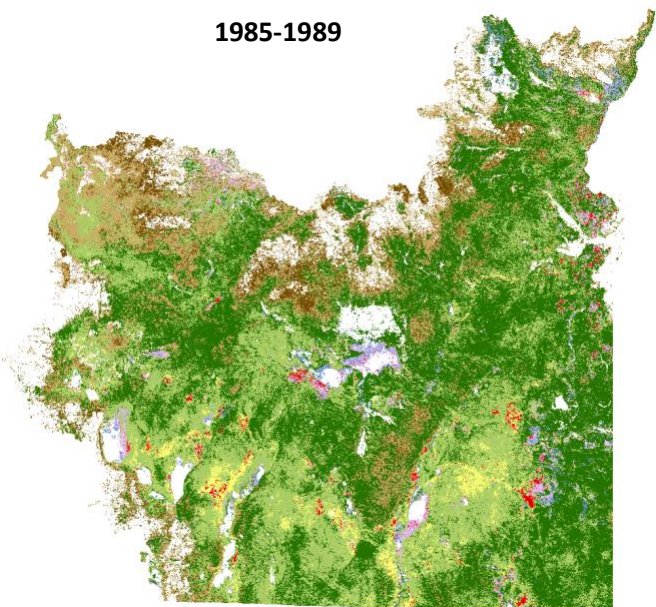

Understanding Rangeland Wildfire Problems: Ecostate Time Series

This time series depicts rangeland health declines / increases in invasive annual grass occupation of Oregon's sagebrush rangelands that are driving the scale and impacts of wildfire problems today.

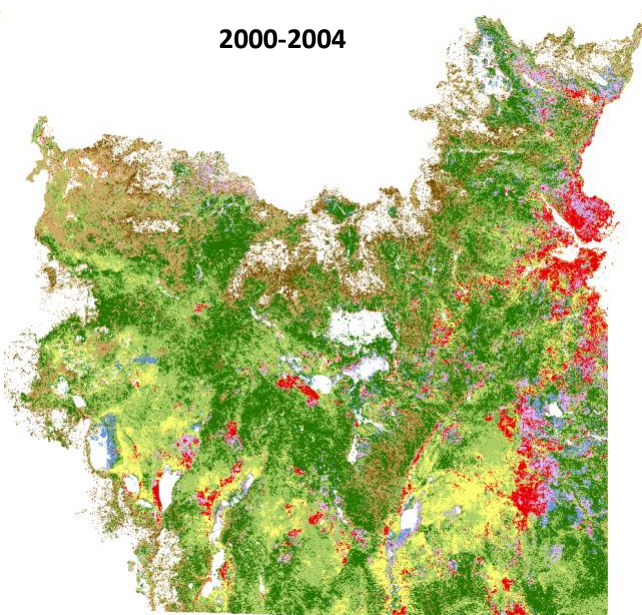

- A: Good condition shrubland
- A-C: Intermediate condition shrubland
- B: Good condition grassland
- B-D: Intermediate condition grassland
- C: Poor condition shrubland
- D: Poor condition grassland
- Juniper: Early-mid encroachment
- Juniper: late encroachment
