

I am a local general practice doc who strongly agrees with oversight of the Oregon Medical Board. They have a history of overreach and unethical targeting of certain physicians, most recently Dr. Paul Thomas. Just because he cares for many patients who choose not to vaccinate according to CDC schedule, which I do as well, he is being held liable for people's own decisions not to vaccinate. We physicians are not in control of our patient's choices! Will I be next, if my Obviously, most pediatricians coerce and bully patients into the CDC vaccine schedule no matter if their child has had a vaccine reaction...and the board condones pediatricians abandoning patients who have different health beliefs and choose not to vaccinate by the CDC schedule. Very fishy there, I would like an independent group to investigate this.
