

I stand firmly and adamantly opposed to this legislation that flies in the face of common sense and logic. The fact that they are jumping on the false "covid threat" is enough for anyone with a brain to see that there is no truth to this fear but every opportunity for the HSUS, Center for Biological Diversity and Animal Welfare Action to twist the narrative to fit their agenda. Maybe someone should do some research and ask the Danish Government about their experience with the mink farms and the unneeded devastation and destruction to personal lives and unnecessary culling of millions animals before this horrendous bill is permitted to move forward. This bill is not only an attack on mink farmers, but yet another damning stepping stone for the total control of that we can eat, wear and how American's can make their livelihood. Not only is it an utter failure on the part of any governing authority to rip the very lifeblood of hardworking, American families out from under them, it is a failure to the economy of the fur industry, a failure to the ecology and a failure of our society to push this brainwashing agenda on the public. Do not allow this bill to proceed. Save the farmers, the animals and our future.
