Re: Testimony in support of SB 826 to provide funding for repairs and upgrades to the Salvage Chief (LSM380).

Dear Senators,

I greatly appreciate the opportunity to provide my enthusiastic support for SB 826. I am a medical advisor to the Salvage Chief Foundation and have over 22 years' experience as a physician assistant working in emergency medicine and orthopedic trauma surgery. I am currently the Deputy Commander for Clinical Services and senior PA in the Oregon National Guard serving as a Colonel at the Medical Command in Salem. In that capacity, I have been involved in planning for Cascadia Event response.

The Salvage Chief is uniquely suited to provide disaster relief and life-saving medical aid in the aftermath of a catastrophic Cascadia Event. The funding provided in SB 826 is critical to the Chief's ability to fulfill that mission. During my deployment to New Orleans in response to Hurricane Katrina in 2005, I saw first-hand the devastation inflicted on a populace in the wake of a natural disaster. The scale of a Cascadia earthquake and tsunami would dwarf the destruction of Hurricane Katrina by several orders of magnitude. It is understood that coastal communities would be isolated and effectively cut off from aid for an extended period of time. The casualties from such an event are estimated in the thousands of dead and injured. In the days and weeks after a disaster of this scale many more people would die if medical assistance was not forthcoming. Fortunately, we have the Chief. The Chief's ability to produce over 3,000 gallons of clean drinking water per day could mean the difference between life and death to victims in town where the water supply has been contaminated or destroyed. The cargo capacity of the Chief could allow us to bring over 100 tons of critically needed medical supplies and equipment to communities that will otherwise be inaccessible. The ship-to-shore power generation capabilities of the Chief could easily supply the electrical needs of an on shore medical facility. The layout of the Salvage Chief would lend itself to the addition of currently available modular medical treatment systems. These could be fitted to the deck of the Chief to provide a floating emergency treatment facility. In addition, the upgrades to the Chief's emergency communications capabilities would provide essential coordination with those responding to the relief efforts.

The Salvage Chief has proven herself time and time again in both wartime and during decades of salvage operations around the world. I firmly believe she has another vital mission to fulfill in coming to the aid of our fellow citizens in the inevitable event of catastrophic natural disaster. I appreciate your consideration of this legislation and strongly encourage support for the efforts to prepare the Salvage Chief for her next mission. I firmly believe passage of SB 826 is vital to that mission.

Sincerely,

Ron Smith PA-C, MMSc.
