

I would like an environmental policy to be placed in the state of Oregon to help reduce the carbon emissions rate and make progress towards sustainability. I urge this course of action because we are rapidly seeing effects of the climate crisis with extreme weather temperatures in Oregon. Without the establishment of environmental framework now, it will be too late in the future to create a difference and change. We can start small in environmental efforts such as increase use of compostable items that could replace plastic. Or we could limit food wastes in stores and restaurants. Food, clothing, and water are three of main factors we should focus on when thinking about establishing an environmental framework in the state. Thank you.
