

To the decision makers at the Oregon State Legislatures,

Decades of research has indicated beyond a doubt that vehicle centric development are cost ineffective and have negative long term effects on the health and happiness of the people who live near the area's selected for "Development".

I implore you to be critical of this bill, and ask yourself:

Is this action is helping to create an environment suited for humans and our vital natural spaces, or if we are disturbing our communities to create even more space that is only able to be used by car owners?
