

We need to be spending our transportation money on climate friendly transportation solutions. We do not need to spend money on expanding freeways. More freeways hasten climate destruction. Climate destruction will lead to more fires and other catastrophes. These will cost the state money and people. We need to think collectively how to prevent climate disasters. More freeways is not a method for that.

This bill will give ODOT a giant blank check to do what they want. ODOT has shown repeatedly that they really like to build highways. They are not working to build better transportation, just more roads.
