

Hi. I support this bill with great enthusiasm. For Oregonians today and into the future, forest legislation must focus on maintaining and increasing the acreage of healthy forest ecosystems. For that to happen, laws need to reflect the will of the most citizens. Current practices focus too much on short term economic gain and ignore overall forest health. New practices must focus on the expansion of forest lands that produce revenue through low impact uses. Anything good for the forests will be good for the salmon and other species. Most of all, people need the peace and grandeur of forests for their own health. Pass this bill to help create an ethos of better forest practices in our state.

Thank you,
Loyal Voter
