

Please vote for passage of HB 2021. We need to move quickly to reduce greenhouse gas emissions and this bill sets appropriate goals to protect our children, grandchildren and future generations. The time is long past for legislative and tangible action to slash emissions and reduce fossil fuel use dramatically. It makes perfect sense to halt major expansions or construction of new gas powered. We need to move quickly instead to increase energy efficiency and the generation of more clean, renewable electricity using renewable sources such as photovoltaics and wind power.
