Chair Beyer and members of the Senate Committee on Energy and Environment

I'm writing to encourage members of the Senate Committee on Energy and Environment to support HB3375A. Global warming of both the atmosphere and oceans and the associated ocean acidification are existential threats to a livable and sustainable environment for future generations. HB3375A establishes a framework to begin addressing one aspect of this threat by supporting the planning for up to 3 gigawatts of offshore wind off the Oregon coast. That planning will be critical in establishing the conditions that this resource can be effectively and sustainably used to the benefit of Oregonians.

Respectfully
