

I have an issue with the -1 amendments.

This appears to just be rewording as the law already requires 10% denatured fuel ethanol by volume and between 9.2% and 10% anhydrous ethanol in concentration. The words "at least" have been added. Perhaps to allow for voluntary higher amounts. But, if higher amounts are allowed, shouldn't the consumer be told the mixture they are buying, especially where it freezes a lot?
