

SB 582- We need solutions for recycling plastics that meets the current and future demands, so we desperately need to modernize our recycling centers. With this being said, this testimony does not include chemical recycling at this point, until further research and usability demonstrates its benefits. We need modernized facilities with the most up to date technology to sort and create products that are truly reusable. There are so many different types of plastic, and right now, basically, most recycling centers can only handle 1 and 2 labels. Our recycling company can't recycle so many things, it's disheartening. We need facilities that also provide compostable product recycling. At present, that doesn't exist. This is an extremely important bill. Please vote for SB 582. Please think of our children and grandchildren. We've created this mess, we need to do something about it. Thank you!!
