

Please vote YES on SB574! The primary reason that lane sharing for motorcycles is beneficial is the decreased traffic problems. If a motorcyclist has to make a right turn at an upcoming intersection, passing stopped traffic in order to do so would allow that much more space for other vehicles that need to stay in the lane traveling straight. Sitting in traffic on a motorcycle is frustrating when it is a very hot day or traffic is extremely heavy. The idea of riding a motorcycle is to be able to navigate more easily through traffic and cities, but that advantage is not fully utilized without being able to lane share.
