

As a biker ????? and motorcycle ?? commuter, I can assure you that a yes to SB 574 would be a step forward to a global solution targeting an easing of heavy traffic in and around our cities. Spending less time in traffic is the ultimate goal of many civil servants studying the growing mess on our highway and streets. By allowing 2 wheels to beat traffic, it will not only do it's part to resolve the daily mess, but it will also show the example and invite more of us (commuter) to enter the movement. To me, it is like a revolution that needs to be done. My Vespa 300cc do not take no room on the street; 3 of them can fit on one parking spot; it goes 90+ miles with 1 gallon of gas; beings more nervous than most car it goes with faster trafic and not against it; use of cellphone, hot drinks or food, being under the influence are not compatible with 2 wheels..... allowing motorcycles to do what they were borne to do just make sense.

Could it in the process be the cause of some accident? YES, of course, it will be a new behavior to get use to, it will ask for a minimum of education and a good campaign of awareness for every road user. But this is not a reason not to move in the right direction! The pandemic and the lock down reduced drastically the number of accidents on the road.....should we then keep the all country in lock down to reduce trafic issues!?

Please vote yes to SB 574
