

There are several points of the Energy Innovation and Carbon Divdend Act I would like you to consider :

- **Personal Responsibility-** The more carbon you produce the more you pay. No longer will people be allowed to pass the impact of their actions on to everyone else.
- **Less Government-** Less government regulation (and spending) required to achive the carbon emission reductions we all know need to occur to slow global warming.
- **Innovation-** Utilizing the powers of Americian Capitalsm on the problem of carbon emmisions will result in more effective solutions more quickly.

Restore Oregon as a leader in environmental lawmaking and pass Senate Joint Memorial 5.

David Hinson
