

To our legislators in Oregon-

I strongly oppose H4141. This bill will make Oregon an unsustainable state to live in. Our products (food and manufacturing) all come with Diesel, from tractors to trucks, to generators to vehicles. Without diesel how will you get groceries to the shelves? The people of this great state do not have the funds to replace everything that runs on Diesel. A combine that harvests the product is hundreds of thousands of dollars. Can you imagine what that will do to our food prices? And that is if they food can get to the grocery store to purchase them. Diesel has become a very Clean fuel. Just as clean as gas with better fuel mileage and performance. This idea is not well thought out. As our Taxes continue to climb, this will be the nail in the coffin for Oregon. People will have to leave to other states just to put groceries on the table for their families. So please, do not even entertain this bill. It's bad for Oregon.
