

Submitter: Robert Keudell
On Behalf Of: Keudell Farms
Committee: Joint Committee On Transportation
Measure: HB4141

The agricultural industry relies on diesel availability in order to produce quality crops throughout the world. There is no known, feasible, alternative to replace diesel consumption for the agricultural industry. It is very upsetting that you are attempting to pass such a bill when the ramifications would be disastrous. If representatives truly knew what the cause and effect would be on agriculture by prohibiting diesel consumption without a logical replacement for farmers, it wouldn't even be considered. I am extremely upset and sad about the lack of knowledge about agriculture in general.
