

Submitter: Christine Sherrell

On Behalf Of:

Committee: Joint Committee On Transportation

Measure: HB4141

I strongly oppose HB 4141. The vehicles that use diesel are the ones that harvest our food supply, move it around our communities, state, nation and world. Diesel powered vehicles are used in repairing our infrastructure, building, moving goods and materials citizens use. Not to mention pick up trucks and some automobiles use diesel fuel as well. Why would you regulate/limit supply/use on an item that is absolutely essential, before creating a cost effective alternative? I can only imagine how this would impact businesses that rely on this source of energy to generate their income. How about you use your efforts to encourage research into alternative Affordable fuels. This will take many years to accomplish and re-tool. We need to quit kicking the can down the road with quick unrealistic fixes to make people at the top feel good. Our economy is already stressed to the max, quit piling on more restrictions, which are harming our economy and creating inflation.
