

Submitter: Linda Minten

On Behalf Of:

Committee: Joint Committee On Transportation

Measure: HB4141

While protecting our environment is important we must do so in reasonable and measured ways. Until there is a suitable replacement for these fuels to ban them would have catastrophic results. Please table until renewable diesel is an available and an affordable option in a quantity that can fulfil our needs.

Our responsibility is first to providing our community with its needs - food, transport, timber and not disrupting our ability to do so by banning critical fuel needs. The impact would be devastating.
