Measure: SB1589

I support SB 1589. We need to restrict the impact of Towed Water Sports boats to alleviate their negative impact to the Willamette River.

Wake Surfing Boats, and those conducting towed water sports, weighing over 5,000 lbs, are specifically designed to create massive artificial surf waves on inland waterways. The Willamette does not generate such waves naturally, and the impact is clear. Well established riverine biologists have concluded that there are negative impacts for the Willamette, from the letter to the Marine Board from NOAA Fisheries, to fisheries biologists at OSU and others. The science is well known and clear, and does not need to be repeated yet again on the Willamette. The recent study from the University of Minnesota also clearly concluded that Towed Water Sports boats are NOT like other motor boats and concluded that wake boats need to be at least 500ft from shorelines to protect them.
