

My wife and mother-in-law with a photo taken prior to the restoration (2017) and the background is after restoration (2022).

Ponded habitat created from restoration project and supported with beaver dam analogues. There are juvenile salmon, steelhead and rainbow trout utilizing this pond.

Beaver dam analogue on a side channel of the Wallowa River.

Screen shot of the NE Oregon Beaver survey, a community and professional scientist lead effort to collect observations of beaver sign.

Me working with local high school interns to build a beaver dam analogue.

A beaver captured on a trail camera following our restoration project.

Multiple species benefit from beaver-created habitat.
