

Submitter: Katie Miller  
On Behalf Of:  
Committee: House Committee On Rules  
Measure: HB3414

The urban growth expansion in our town allows for farmland to be taken over by corporations and factories. Notably, a semiconductor plant at the beautiful Dersham Rd. exit we take every day. My husband works at a semiconductor factory, and I promise you that the waste water coming out of those plants is not purified as promised. They are polluting into the ground water. What happens to those of us with acreages nearby? Those who have wells and are drinking that polluted, carcinogenic water? Polluted with Gallium Arsenide. No thank you. Please stop ruining our beautiful small towns. There are few greedy people who want to take advantage of this situation, and my husband and I are highly opposed. There is nobody to stick up for the little people except the little people ourselves. It is exhausting. Why does it seem corporations and money always win? Please stand up for us little people. We are the caretakers of the Earth.
