

Submitter: Nicole De Graff

On Behalf Of:

Committee: House Committee On Behavioral Health and Health Care

Measure: HB2278

Dear Members of the committee,

The state allowed pharmacists to give kids the Covid-19 vaccine and now we are seeing huge amounts of cases of myocarditis in kids as well as other reactions that are life altering. Providers are not trained to recognize injuries such as this and the flu shot would be no different. To allow pharmacists to give kids the flu shot is purely an income stream generator. SIRVA is the highest paid out injury in vaccine court for Adults and it is due to inexperienced techs allowed to administer the flu shot.

I oppose this bill.

Please vote No.

Thank you.
