

Submitter: Brandan Topham

On Behalf Of:

Committee: Senate Committee On Natural Resources

Measure: SB710

This seems to address two of the biggest issues on this topic. It actually puts a number on what counts as interference and allows that a geologist who looks at things on the ground and tests things on the ground should be considered in favor of a computer model which are famous for being used incorrectly or are flat out wrong. That need not be a problem if a person goes and studies things finds the model is wrong then correct it in favor of the real world. Owrdr is famous in my area for refusing to cceed that the real wold may be different no matter who or what test is done to show that their computer models are faulty.

Please allow this bill to go forward.

Thank you for your time.

Brandan Topham
