

I SUPPORT [HB 2193].

Animal processing waste could be used for fertilizers such as: Bone Meal, Blood Meal, Manure, and Fish emulsions. But, I'm certain someone will come up with some more uses.

I almost forgot, I'm sure I've chaffed a few Legislator's hides via my Testimonies.

Perhaps certain animal hides could be grafted onto the chaffed rumps of the aggrieved Legislators, thereby allowing for some additional work from their new-found, taxpayer bought backsides. And, if they screw-up again, and are embarrassed, they can repeat the process and sew on a new hide.

David S. Wall

Mr. Oregon Concur...This may not be a good idea. Legislators can change out their chaffed hides at will.
