

Submitter: Alma Gonzalez

On Behalf Of:

Committee: House Committee On Behavioral Health and Health Care

Measure: HB3223

As a Dental assistant of 10 years, I am horrified to think that future assistants would not be required to prove their knowledge of subjects that can directly effect another human. This would put the general public in danger of cross contamination, possible over exposure of radiation, possible damage to teeth and oral tissue. I've worked alongside assistants that have completed an 8 week DA course. Their lack of knowledge directly placed others in danger.
