

Submitter: James Buck

On Behalf Of:

Committee: Senate Committee On Natural Resources

Measure: SB530

Eminent scientists indicate we are at a global crisis regarding climate change which threatens multitudes of species on this earth including humans. Oregon needs to undertake additional efforts to sequester carbon and using natural methods disturbs the environment less than other approaches. The incentives included in the design will hopefully promote partnerships and lead to other climate mitigation efforts in the future. Please do not delay in passing SB 530 as the funding will help leverage additional resources becoming available through IRA funding which is both smart and effective use of tax dollars.
