

Submitter: Calista Songstad

On Behalf Of:

Committee: House Committee On Education

Measure: HB2959

I oppose this bill as written, particularly 2 e.

I do understand that some parents and guardians struggle to provide medical, dental, and vision costs for their children. However, school is supposed to be reserved for learning primarily and is instead is spending far to much of every school day discussing medical information, receiving medical care, and blocking parent involvement in these conversations and decisions. Medical records belong at the child's medical providers office of choice and only brought to the school if their parent has initiated it by choice.
