

Submitter: Judi Soloway

On Behalf Of:

Committee: Senate Committee On Natural Resources

Measure: SB530

Thank you for this opportunity to offer my testimony on Senate Bill 530. Oregon has made important progress to reduce emissions, but more is needed. We are warned by the IPCC that we need to do much more to avoid the worst effects of the climate crisis. This bill will encourage and allow foresters, farmers, ranchers across the state to use practices that will preserve our land and water. I have an undying interest in this happening so that my children and grandchildren get to enjoy the incredible natural beauty of our state and even more importantly, to have clean fresh air and water to breathe. Please invest in Natural Climate Solutions, SB 530, to help address climate change and the livability of our state.
