

Submitter: Emily Herbert

On Behalf Of:

Committee: Senate Committee On Natural Resources

Measure: SB530

SB530 does a good job of initiating measurements needed to verify changes in sequestration, build a workforce to take the actions needed to build the capacity of natural lands to sequester more carbon, and attaches funds and oversight by the folks who have long served the State in climate policy. It is a "must pass" for a future with hope for growing plants and trees, food, and having a future for humans in Oregon.
