

Submitter: Jennifer Sprague

On Behalf Of:

Committee: Senate Committee On Energy and Environment

Measure: SB543

I strongly support discontinuing the use of all polystyrene foam containers, because of adverse health effects and trash and pollution from these single-use containers. We do not need polystyrene foam to create containers or packaging materials. Food containers, in particular, should not be made from polystyrene foam, because toxic chemicals from the foam can leech into the food when it is reheated in microwaves (which many people do). I support SB 543 and urge the committee members to pass it.
