

Submitter: James Moore  
On Behalf Of: James and Moore  
Committee: Senate Committee On Education  
Measure: SB426

It would seem the most simple of suppositions that removal of toxic chemicals from schools in order to protect our children is of great importance. Which interests would assume otherwise?

Beyond Toxics has provided compelling information that these chemicals are not being adequately addressed.

If children are subjected daily to chemicals which negatively impact their health, IN OUR SCHOOLS, then we must act together to see that this does not happen.

Schools and school boards which routinely use the same chemicals over and over on playgrounds, without fully understanding the implications, play a role.

Political decisions which offer gain or influence to some politicians may encourage avoidance of taking action to remedy the problem.

We count on our legislators to make those decisions which protect our children, and all of us who love our children are counting on you to act, in all haste, and remove harmful chemicals from schools.
