

Submitter: Robert Sweitzer

On Behalf Of:

Committee: Senate Committee On Judiciary

Measure: SB422

As a rider for 30+yrs and have traveled several very long rides there have been many times that traffic has come to a complete stop or barely moving, an we have had to ride on the right shoulder slow mind you for a few miles to get back to moving traffic, the reasoning for this is because of heat exhaustion you get sitting on a very hot bike that needs air to cool itself off, it's not good for the bike and certainly not good for the riders, for this reason, I would support lane splitting or the ability to ride the shoulder of the road when needed

Sincerely

Robert
