

Submitter: Donna Bleiler
On Behalf Of:
Committee: Senate Committee On Education
Measure: SB854

I STRONGLY OPPOSE SB 854

This bill requires each school district board to develop written plan establishing climate change instructional program for kindergarten through grade 12 with standards developed by Department of Education.

The program is to "educate" students on how to confront the current and expected impacts of climate change from diverse decision-making perspectives, and discuss economic and political factors contributing to climate change - do they contribute, where is the science?

Who holds the truth about climate change? Science is never settled, and it requires facts. There is a documented statement from the U.N. that the climate crisis was invented to suck money out of nations. Climate changes, but to use it for indoctrination and propaganda to shape the mind of kids towards a political agenda is not education.
