

Submitter: Brant Boyer

On Behalf Of:

Committee: Senate Committee On Energy and Environment

Measure: SB803

Currently Electric trucks are \$500,000. They can only haul 80,000 pounds for 200 miles. We haul 103,000 pounds. Are trucks run 24 hours a day, so the would not be time to charge the batteries. The truck manufacturers have told us electric trucks won't work for us at this point. Even if they would the cost of everything in society will skyrocket so much to cover the cost of the trucks and where is all of the new power coming from? We are buying new trucks that are way kinder to the environment but electric trucks won't work for every application
