

Submitter: Dale Swanson

On Behalf Of:

Committee: Senate Committee On Energy and Environment

Measure: SB803

Dear all on Senate Committee on Energy and Environment.

Ban of diesel is the wrong stance. Diesel is a clean fuel if run through emission systems as the new Class A and Class B trucks are currently. Jets that land at all airports operate on a grade of diesel called Jet A or similar. Are we going to stop airplanes from coming to Oregon. This needs to be thought through before half assing a bill through. While we are all concerned about the air and emissions, the war in Ukraine generates huge amounts of waste as well as south and central america and africa. Texas is generating billions of dollars embracing fuel, while Oregon could do the same and utilize the income to correct issues in state.
