

Submitter: HENRY SCHMID

On Behalf Of:

Committee: Senate Committee On Energy and Environment

Measure: SB803

ridiculous bill? until an alternative is found and implemented this will destroy the small farmer? natural gas is a tremendous alternative? it is clean burning ad supplies are limitless? hydrogen fuels are another alternative? conversion can be done easily with government subsidies instead of subsidizing EV's which are another disaster created by the mining of the rare earth minerals? Generation of electricity with windmills is a disaster by killing birds and will eventually create massive amounts of hazardous waste?
