

Submitter: Marsha Wilson

On Behalf Of:

Committee: Senate Committee On Natural Resources

Measure: SB85

It has been well documented that not only are animals from these "factory farms" are not healthy. Over crowding leads to the need for continual dosing of antibiotics - which adds to the resistance to these antibiotics making them less and less effective when desperately needed for humans. In addition, the treatment of these animals is often cruel and unnecessary..

But this is only the beginning! The concentration of these animals produces mass quantities of waste. This waste is difficult to contain and is a large source of both local and extended pollution!

Please support SB 85!!

Thank you,

Marsha L Wilson
