

Submitter: Wes Pilcher

On Behalf Of:

Committee: Senate Committee On Natural Resources

Measure: SB85

I live and farm next to a dairy. They are doing a great job protecting the environment through spreading animal manure on my farmland. This allows my operation to use less man made fertilizers, there by increasing soil health which allows me to sustainably produce the healthy nuts and vegetables that we all eat. I oppose any additional regulations to CAFO operations. Please do not make it more difficult for those of us that produce affordable food and fiber for the world to operate. I hold a B.S. degree from OSU in horticulture. I am also a third generation family farmer here on this land. I know what works and I want to continue improve the land for generations to come. Thank you for reading this.
