

Submitter: Terry Anderson

On Behalf Of:

Committee: Senate Committee On Natural Resources

Measure: SB789

Senators:

I support the permanent limitation on rapeseed/canola acreage in the Willamette Valley. As a vegetable gardener I rely on vegetable seed producers in the valley not only for brassica species seed (which as you know is threatened by cross-contamination and disease pressure from canola production) but also for many other species. The viability of small and medium sized seed farmers would be severely impacted should canola production be allowed to increase.
