

Hello! I would like to say first of all that I'm a cna that been working for so long have experience in working with elderly and memory care facilities around portland, I would say that I oppose to this bill because the bill should benefit the people the hard working Americans that wake up every morning to make money to pay their bills. I would say that my point is that the government should be on the side of the people, the workers not the companies that generate millions of dollars. Agency is a decent and been my job for a while and I love what I do, the pay it's reasonable for he work we do, drive far sometimes , take care of lots of patients and it's great to work with my agency that supports me and help me, please listen to the people that actually are out there working hard every morning to cover that gap of shortage of healthcare workers that really need that extra pay, don't lower the rates.
