

Submitter: Marleen Smith

On Behalf Of:

Committee: House Committee On Behavioral Health and Health Care

Measure: HB2002

I oppose this bill because there hasn't been enough research on doing life changing surgeries &/or giving hormones or blockers to children. The research that is out there shows only .001% of children under 18 show serious sexual Diaspora. It isn't the right of schools or government to experiment on our children to do life altering surgeries or medical treatment. All of this will affect negatively & life altering for children. They are not able to discern what is best for them under 18. A parent knows their child more than other adults. This transgendered nonsense is a popular trend with no thought of long term effects. It changes the whole body mind & spirit. The medical field considers transgendered as a mental illness. After treatment children go to phycologist at 90% & are suicidal. Please don't be responsible for negatively affecting our precious children.
