

Submitter: Anthony Albert

On Behalf Of:

Committee: Senate Committee On Natural Resources

Measure: SB85

Cattle and Mega-dairies are a huge part of the problem: Each year livestock emits 7.1 Gigatonnes of Co2-equiv per year, which is 14.5% of all anthropogenic greenhouse gas (GHG) emissions globally. Cattle make up 9% of total livestock emissions globally. In Oregon, agriculture is a leading source of methane emissions.
