

Submitter: Julie Tompkins

On Behalf Of:

Committee: Senate Committee On Energy and Environment

Measure: SB525

The fact that this issue is even up for debate is laughable. This is a very simple matter: is there any humanity left, or merely corporate greed? Fossil fuels are harming the planet and its people. They need to be banned, immediately. The pollution--both chemical and noise--caused by these blowers is obvious. Think beyond the now and focus on the future. What kind of world do you want to not only live in, but help build?
