

Submitter: Diana Margason Olson
On Behalf Of: self
Committee: House Committee On Judiciary
Measure: HB2005

3-D printed guns being made of non-metallic materials will not be detectable by metal detectors and should not be allowed in any state, including Oregon. Ghost guns, do not have any serial numbers so there is not any way to trace the ownership if used unlawfully. Federal, state, county and city law enforcement needs all the help they can use to stop illegal use of firearms by anyone. Neither of these type of guns should be allowed. I cannot understand the logic of using the 2nd Constitutional Amendment to justify having these types of guns. The framers of the Constitution were not able to even visualize guns made by 3-D printers or the sale of bits and pieces of guns arriving by UPS, FEDEX to personal addresses without serial numbers. Somewhere, in some state, this has to stop. Let Oregon help lead the way to put limits on Ghost Guns and 3-D printed guns without serial numbers and any gun not made of metal.
